

KRUS Electronics Ltd. is a Bulgarian company for high-tech development, production, engineering, installation and service of **integrated electronic security systems.** Since 1991 **KRUS**

Electronics

creates its own hardware and software based on modern information and communication technology and integrated devices from leading manufacturers in systems able to address the full range of security issues of any objects: from home and small office to hotel and resort areas and even nationally. Moreover, using all modern information and communication technologies our integrated systems are built with modular expansion possibilities, connections between sub-systems in order to deliver complete and accurate picture of events processed, high level of data protection and functions of self-diagnostics in real time.

The Solutions of **KRUS Electronics** in the field of integrated electronic security systems are in two main directions:

- Surveillance systems, identification, recording and archiving;
- Systems for access control, security, management of buildings and sites with payment;

These solutions are designed not only for internal system integration, but also for building complex security systems with elements of both major groups.

Qualities and capabilities of integrated electronic security systems manufactured and installed by **KRUS Electronics** is an indicator that our systems of varying degrees of complexity work successfully in [over 200 sites in the country and abroad.](#)
